

# ASSESSING COMMON SECONDARY CONDITIONS

## Quick screening cues for providers

### UTI RISK SCREENING

#### HOW TO SCREEN

- Ask if patient is a catheter user → Yes = positive screening
- Ask if patient has the sensation of not fully emptying when they void → • Yes = positive screening
- Ask if patient has a history of recurrent UTI → • Yes = positive screening

#### RESULTS

#### GENERAL CLINICAL CONSIDERATIONS

- Urology referral for urodynamic study, medication management and or catheter assessment
- Catheter users may benefit from a closed tipped system catheter which bypasses the first few millimeters of the urethra
